

## Royal Air Force Charitable Trust Enterprises - Sustainable Development Policy

RAFCTE has been promoting the excellence of Air Power and the RAF for over 50 years by placing them at the heart of a programme of sustainable, world-class events and activities. The Royal International Air Tattoo is at the centre of the RAFCTE and its parent charity the Royal Air Force Charitable Trust, and will continue to be an annual, world-class event staged safely and sustainably, delivering outstanding entertainment, excellent value, and a unique experience to all its customers and stakeholders. It brings together the best of international military aviation whilst showcasing skills, technology and innovation across aviation and space.

RAFCTE recognises that, in its day-to-day operations, its business impacts the environment in several ways. It strives to minimise negative social, environmental, and economic impacts whilst maintaining the high quality of the work produced.

RAFCTE is committed to:

- demonstrating leadership within the aviation event industry in all areas and particularly within the field of sustainable development of events.
- complying with, and keeping up to date with, all applicable legal requirements and with other mandates to which the organisation subscribes.
- seeking continuous improvement in all aspects of the company's sustainability performance.
- seeking to influence their contractors and partners at RIAT, along with the supply chain they support, to improve their sustainability performance.

In respect of this intention, the following are ongoing objectives for RAFCTE:

- Working with the Trust, develop activity and contribute to the Group's Strategic Intent initiatives with 'Inspire' as the centrepiece.
- Develop and exploit RIAT's standing as the global leading public aviation event to include space, sustainable event delivery and showcasing the development of sustainable aviation.
- Optimise RAFCTE's relationships with key stakeholders and customers to generate new revenue.

The key objectives for sustainability at RIAT 2024 are:

- Improve the visitor arrival experience at the event, tell them our sustainability journey and their role in helping us achieve our goals. Increase the visitor's exposure to sustainable aviation.
- In line with the show theme, 'testing the boundaries' introduce innovative new products to RIAT facilities and exhibits on the showground.

- Remove single-use plastics from the public showground by removing plastics from our public catering offer and by instructing exhibitors and sponsors not to bring single use plastic freebies/giveaways.
- Scope and where possible test the foundation of a Green Road Travel Plan to include car share, public transport, shuttle buses, visitor parking, reducing non-essential traffic and visiting aircraft.
- Maximise static aircraft in the visitor experience by facilitating access to aircraft and creating interactive exhibits.

This policy will be reviewed continuously and will be specifically examined annually.
